HMD Series

0.5kV - 6kV; 12W
PRECISION REGULATED, REVERSIBLE POLARITY
HIGH VOLTAGE POWER SUPPLIES

- FEATURES
  - Precise high voltages up to 6kV at max. 12W
  - Polarity electronically reversible
  - Limit potentiometers for output voltage and current
  - Patented resonance converter technology
  - Very low ripple and noise
  - Very low EMI
  - Metal case
  - Modified versions available on request
  - Made in Germany

HMD modules are highly precise and highly stable analog controlled high voltage power supplies with reversible output polarity. The HMD series covers output voltages of up to 6kV in a compact metal box. A version in a 3U/8HP cassette is available too (HED series). The maximum output power is 12W.

The HV output is brought out via an HV cable or SHV connector (option R). The supply and control voltages are connected via a D-Sub 9 connector. Analog I/O is provided for remote monitoring of output voltage and current. The output voltage control is achieved by means of a potentiometer or a control voltage (internal reference voltage). Remote ON and output polarity control inputs are provided. The patented resonant converter technology and the metal box shielding guarantee high efficiency and low EMI.

The HMD modules can be used as standalone DC/DC converters or combined into THQ series multichannel AC/DC HV power supplies.

For units with SHV connector, please add “R” to the model name, eg. HMD-2R6-24-5-ER

- SPECIFICATIONS
  - Input Supply Voltage ($V_{\text{IN}}$): $+24\text{V}_{\text{DC}} \pm 5\%$ (max 0.8A)
  - Output Limits: set by built-in potentiometers LIMIT V and LIMIT I
  - Line Regulation: $< 1 \times 10^{-5} \times V_{\text{NOM}}$ ($\Delta V_{\text{OUT}} / \Delta V_{\text{IN}}$ min to max supply voltage)
  - Load Regulation: $< 5 \times 10^{-5} \times V_{\text{NOM}}$ ($\Delta V_{\text{OUT}} / \Delta R_{\text{LOAD}}$ no load to rated load)
  - Temperature Coefficient: $5 \times 10^{-5}/\text{K}$
  - Ripple: typ. $\leq 3\text{mV}_{\text{PP}}$, max. $7\text{mV}_{\text{PP}}$
  - Supply / Control Connector: D-Sub 9 male
  - Output: shielded HV cable (600mm) or SHV connector (option R)
  - Control: analog control signals: VSET, VMON, IMON
  - 5V control inputs: POL, ON

HMD Series

Reference Voltage (VREF): 5V (1mA) or 10V (1mA) (model dependent).
This reference voltage is intended for external potentiometer to program the output voltage (connect wiper to VSET)

Voltage Setting (VSET): \( V_{\text{SET}} - 0 \) to \( V_{\text{REF}} \) results in \( V_{\text{OUT}} = 0 \) to \( V_{\text{NOM}} \pm 1\% \) (input impedance: 1\( \Omega \))

Voltage Monitor (VMON) \( V_{\text{OUT}} = 0 \) to \( V_{\text{NOM}} \) results in \( V_{\text{VMON}} = 0 \) to \( V_{\text{REF}} \pm 1\% \) (output impedance: 10k\( \Omega \))

Current Monitor (IMON) \( I_{\text{OUT}} = 0 \) to \( I_{\text{NOM}} \) results in \( V_{\text{IMON}} = 0 \) to \( V_{\text{REF}} \pm 1\% \) (output impedance: 10k\( \Omega \))

Polarity Control (POL): 5V level, switchable at \( V_{\text{OUT}} = 0 \)
High or open: \( V_{\text{OUT}} \) positive (red LED)
Low: \( V_{\text{OUT}} \) negative (green LED)

The polarity may only be reversed when the output voltage is 0V!

Typical switching sequence:
- switch output off (ON -> High) -> wait 4s for ramp down / discharge
- reverse polarity (POL) -> switch output on (ON -> Low)

Remote ON (ON) 5V level, active Low
Low: \( V_{\text{OUT}} \) according to \( V_{\text{SET}} \) with ramp ca. \( V_{\text{NOM}}/4s \)
High or open: \( V_{\text{OUT}} = 0 \) with ramp ca. \( V_{\text{NOM}}/4s \)

Protection: Overload, arc and output short circuit.

Only one short circuit or arc event per second allowed!
In case of higher arc/S.C. frequency the RMS output current must be limited to \( I_{\text{NOM}} \)

Operating temperature: -20°C to +40°C
Storage temperature: -20°C to +85°C
Dimensions: see drawing

All voltages are referenced to GND

**Safety Advice**

Design, installation and inspection of machinery and devices carrying high voltage require accordingly trained and qualified personnel. Appropriate safety rules and directives must be complied with. Improper handling of high voltage can mean severe injuries or death and may cause serious collateral damage!
